Abstract

Present study deals with the diversity of Gautala autramghat reserved forest in Marathwada. In order to understand the present status of flowering plants of the area, a survey has been carried out about two years. The main dominant components covering the area are *Tectona grandis* L.f., *Terminalia arjuna* W. & A., *Dalbergia sissoo* Roxb. ex DC., *Zizipus mauritiana* Lamk., *Butea monosperma* (Lamk.) Taub.

Keywords: Gautala Autramghat, Marathwada, Diversity.

INTRODUCTION

Gautala autramghat reserved forests is situated on west-north direction of Aurangabad, Marathwada. It has an area about 261 sq.km. It covers 64 sq. km area of Jalgaon District and 197 sq.km. area of Aurangabad District. Its geographical position is longitude E 74°, 55', latitude N 19°, 54', and altitude 1904 ft. Today, forest has lost almost its characters due to biotic interference. Only few wild animals have seen occasionally in this forest, which are Panther, Wolf, Fox, Deer, Monkey, Snake, Rabbit, different birds, butterflies and many insects. Recently government has taken steps for rehabilitation of the area and fencing is completed all around.

Topographically the entire tract forms Satmala and Ajantha hill series. It has slopes in all direction. The slopes are moderate to steep. The geological formatting of deccan trap with basalt quartz and quartzite. The soil is clay in plateau and loam on slopes. The water holding capacity of the soil is remarkably high. The mean daily maximum temperature ranges from 27.5-30.5 °C and average rainfall is 600 mm.

MATERIALS AND METHODS

The study area was visited regularly according to well scheduled plan. Collection of plants was conducted following the guidelines suggested by Santapau (1955), more frequent collection of plants was made during rainy and post rainy seasons. The specimens collected during field trips were preserved following standard method. The herbarium of dried and pressed plants was prepared according to customary method (Rao, 1977). Rare and Threatened plants were critically surveyed. The collected plants were identified in the laboratory with the help of Flora of Marathwada (Naik, 1998); Yadav and Sardesai, 2002; Almeida, 1996; Singh and

Karthikeyan; 2002; Cooke, 1967).

Diversity of Flowering Plants

Forest of Gautala autramghat is a dry deciduous forest type the most common trees are found in area are *Tectona grandis* L.f., *Terminalia arjuna* (Roxb.) Wt. & Arn., *Dalbergia sissoo* Roxb. ex DC., *Zizipus mauritiana* Lamk., *Butea monosperma* (Lamk.) Taub., *Gliricidia sepium* H.B. & K., *Azadirachta indica* L., *Acacia nilotica* (L.) Del., *Bauhinia racemosa* Lamk., *Acacia chundra* (Roxb. ex Rottl.) Willd., *Ailanthus excelsa* Roxb., *Cassia fistula* L., *Mitragyna parvifolia* (Roxb.) Korth., *Boswellia serrata* Roxb. ex Coleb. Along with tree species as undergrowth, number of shrubs, herbs, climber or twiners, grasses etc. were also surveyed; common shrubs covering the area are *Clerodendrum serratum* (L.) Moon, *Helictres isora* L., *Maytenus emarginata* (Willd.) Ding Hou., *Calotropis procera* (Ait.) R. Br., *Balanites aegyptiaca* (L.) Del., *Cassia auriculata* L., *Barlaria Longiflora* L.f., *Grevia tiliifolia* Vahl., *Annona squamosa* L., *Woodfordia fruticosa* (L.) Kurz.

Most common climbers of the forest are *Cissus woodrowii* (Staff ex Cooke), *Cocculus hirsutus* (L.) Diels., *Cryptostegia grandiflora* R.Br., *Pergularia daemia* (Forsk.) Choiv., *Argyrea cymosa* (Roxb.) Sweet, *Tinospora cordifolia* (Willd.) Miers., *Clematis heynei* M.A. Rao, *Momordica dioica* Roxb. ex Willd.

The major herbs which are dominating the area are *Alysicarpus heyneanus* Wt. & Arn., *Alysicarpus bupleurifolius* (L.) DC., *Crotalaria notonii* Wt. and Arn., *Bidens biternata* (Lour.) Merr. & Schrrf., *Boerhavia diffusa* L., *Euphorbia hirta* L., *Indigofera duthiei* Drum. ex Naik., *Justicia vahlii* Roth., *Leonotis neptefolia* (L.) R.Br. *Rungia parviflora* Nees., *Tridax procumbens* L., *Cleome simplicifolia* (Camb.) Hook.f. & Thoms., *Argemone maxicana* L., *Polygala arvensis* Willd., *Sida acuta* Brum.f., *Malvastrum coromandelianum* (L.) Gark, *Tribulus terrestris* L.

Common grasses found in Gautala are *Andropogon pumilus* Roxb., *Chionachne koenigii* (Sperng.) Thw., *Chloris inflata* Link., *Cymbopogon martinii* (Roxb.) Wats., *Dichanthium caricosum* (L.) A.Camus., *Dinebra retroflexa* (Vahl.) Panz., *Eremopogon foveolatus* (Del.) Stapf., *Isachne meeboldii* C.E.C., *Iseilema prostratum* (L.) Anders, *Melanocenchris jacquemontii* Jaub., *Phragmites karka* (Retz.) Trin., *Setaria verticillata* (L.) P.Beauv., *Echinochloa colonum*

Received: Aug 10, 2012; Revised: Sept 21, 2012; Accepted: Oct 25, 2012.

(L.) Link., *Eleusine indica* (L.) Gaertn.

Presently some plants are very common in the area but they may be threatened due to over exploration for their medicinal use few of them are *Chlorophytum tuberosum* (Roxb.) Baker, *Gloriosa superba* L., *Cissampelos pariera* L., *Curculigo orchoides* Gaerth.,

Celastrus paniculata Willd *Tarvernaria cuneifolia* (Roth.) Arn., *Cleome gynandra* L., *Mucuna pruriens* Hook., *Momordica dioica* Roxb., *Hemidesmus indicus* R. Br., *Aristolochia indica* L., *Curcuma pseudomontana* Grah., *Dremia indica* (Roxb.) Jessop. Enumeration of plant diversity is given in table no. 01.

Table 1. Enumeration of Plant Diversity

Botanical Name	Flowering Season	Status	Local Name
Family-Ranunculaceae			
<i>Clematis heynei</i> M. A. Rao	Sept- Dec	Frequent	Morwel
Family-Annonaceae			
<i>Annona reticulata</i> L.	Sept-Oct	Occasional	Ramphal
<i>Annona squamosa</i> L.	July-Sept	Frequent	Sitaphal
Family-Menispermaceae.			
<i>Cissampelos pareira</i> L.	Sept-Oct	Rare	Pahadwel
<i>Cocculus hirsutus</i> (Linn.)Diels	Sept-Feb	Common	Wasanwel
<i>Tinospora cordifolia</i> Miers	July-Oct	Common	Gulwel
Family-Nymphaeaceae			
<i>Nymphaea nouchali</i> Burm.	Throughout	Frequent	Nilkamal
<i>Nymphaea pubescens</i> Willd.	Throughout	Frequent	Kamal
Family-Papaveraceae			
<i>Argemone mexicana</i> L.	June-April	Common	Bilayat
Family-Capparidaceae			
<i>Capparis decidua</i> (Forsk.) Pax.	July-Aug	Common	Nepati
<i>Cappari sepiaria</i> L.	Mar-July	Frequent	Waghati
<i>Maerua oblongifolia</i> (Forsk.)	Nov-May	Occasional	-----
Family-Cleomaceae			
<i>Cleome gynandra</i> L.	June-Dec	Common	Pandharitilwan
<i>Cleome monophylla</i> L.	July-Nov	Occasional	-----
<i>Cleome simplicifolia</i> Hk.f. &T.	July-Nov	Common	-----
<i>Cleome viscosa</i> L.	June-Oct	Occasional	Piwilitilwan
Family-Polygalaceae			
<i>Polygala arvensis</i> Willd.	July-Sept	Common	Dhudhi
<i>Polygala chinensis</i> L.	June-Jan	Common	Dhudhi
Family-Portulacaceae			
<i>Portulaca oleracea</i> L.	Throughout	Common	Ghol
Family-Malvaceae			
<i>Abelmoschus crinitus</i> Wall	Aug-Sept	Frequent	Ranbhendi
<i>Abutilon indicum</i> (L.) Sweet.	Oct-Feb	Occasional	Petari
<i>Abutilon glaucum</i> Cav.	Oct-Dec	Occasional	Mudra
<i>Hibiscus lobatus</i> (Murr.)	Aug-Jan	Frequent	Ranambadi
<i>Hibiscus trionum</i> L.	Sept-Dec	Frequent	-----
<i>Kydia calycina</i> Roxb.	Oct-Dec	Occasional	Warang

<i>Malvestrum coromandelium</i> L.	June-Jan	Common	-----
<i>Sida acuta</i> Burm.	Aug-Oct	Common	Atibala
<i>Sida cordata</i> (Burm. F.) Borss.	July-Jan	Common	Bala
<i>Sida cordifolia</i> L.	Aug-Nov	Common	Bala
<i>Thespesia populnea</i> (L.) Soland.	Sept-Jan	Frequent	Parosa pimpal
Family-Bombacaceae			
<i>Bombax ceiba</i> L.	Mar-June	Occasional	Katesawar
<i>Ceiba pentandra</i> (L.) Geartn.	Jan-Mar	Occasional	Pandharisawar
Family-Sterculiaceae			
<i>Helicteres isora</i> L.	Aug-Sept	Frequent	Murudsheng
Family-Tiliaceae			
<i>Corchorus aestuans</i> L.	June-Sept	Frequent	-----
<i>Corchorus capsularis</i> L.	Aug-Dec	Common	-----
<i>Corchorus fascicularis</i> Lamk.	Seot-Dec	Common	Haran khuri
<i>Corchorus tridens</i> L.	Sept-Dec	Rare

<i>Themeda quadrivalvis</i> (L.) O. Ktze.	Aug-Jan	Common	Gondal

DISCUSSION

All vegetation of forest is affected by biotic and abiotic factors as, cuttings of trees for fuel wood, overgrazing by cattle, over exploitation of medicinal plants, leaving behind polythene bags and plastic bottles, have resulted the deflection of many species from the area so we suggested some protective measures for regenerating the vegetative of forest. Carrying of polythene bags, paper plates and plastic bottles should not be allowed in side the forest. To built up the sufficient staff for the forest department. To ban collection of plants for any purpose. To educate the local people through awareness programme. Carrying of wet and living things or branches of trees is considered as offensive.

ACKNOWLEDGEMENT

Authors are thankful to Prin. S. D. Shastri, Pratishthan Mahavidhyalaya, Paithan, Dist-Aurangabad and Prin. Dr. R.K. Ippar, Vaidyanath College, Parli-V., Dist- Beed for providing laboratory facilities and constant encouragement during this course of investigation.
